# AP Summer Assignment

## Course: AP Biology

<table>
<thead>
<tr>
<th>Assignment title</th>
<th>AP Biology Summer Assignment: Video Notes / Biological Collection Photo Blog</th>
</tr>
</thead>
</table>
| Date due         | Part 1 – Video Notes – due 1\textsuperscript{st} day of class  
Part 2 – Photo Blog – due 2\textsuperscript{nd} day of class |
| Estimated time for completion | 10-20 hours |
| Resources needed to complete assignment | ☒ School assigned textbook  
☐ Student purchased book(s)  
☒ Other supplies: \texttt{device(s) with internet and photography capabilities.} |
| How the assignment will be assessed | The Video Notes and the Biological Collection Photo Blog will be scored using the accompanying rubric and guidelines. Both assignments will be averaged together and will be counted as a test grade 1\textsuperscript{st} quarter. |
| Purpose of assignment | ☒ Review of foundational material/concepts/skills.  
☒ Expose students to required material/concepts/skills/texts that cannot be covered during the academic year.  
☒ Have students read material that will be discussed or used in class at the beginning of the year. |
Welcome to AP Biology! This course is designed to be the equivalent of a two-semester introductory biology course usually taken in the first year of college. In other words, it’s a little like drinking from a fire hose. It will be a rewarding experience, but as with most things that are, it will also be challenging. Throughout the course, you will become familiar with major recurring ideas that persist throughout all topics and material.

**The 4 Big Ideas of AP Biology**

**Big Idea 1:** The process of evolution drives the diversity and unity of life.
**Big Idea 2:** Biological systems utilize free energy and molecular building blocks to grow, to reproduce and to maintain dynamic homeostasis.
**Big Idea 3:** Living systems store, retrieve, transmit and respond to information essential to life processes.
**Big Idea 4:** Biological systems interact, and these systems and their interactions possess complex properties.

On the pages that follow, you’ll find detailed instructions of the two assignments that comprise your summer work for AP Biology. The first assignment is related to becoming acquainted the Science Practices that you’ll be learning about this year in AP Biology. The second part deals with collecting, through photography, examples of biological terms or concepts and creating a photo blog of your collection.

Your video notes are due on the 1st day of AP Biology and your photo blog will be due on the 2nd day. Both will be averaged together and counted as a test grade for 1st quarter. **No late summer assignments will be accepted!**

Included in this packet are the following documents:

Assignment #1 – Video Notes – due 1st day of AP Biology

Watch the videos listed below and take hand-written notes on each of them. The note should be your original work. EACH note sheet will be scored 0 to 5 based on completeness and thoroughness as shown in the rubric below. Note pages will not be accepted late nor will they be accepted typed.

No notes OR copied from a peer.
Several criteria are missing from entry
All criteria are met, but there’s room for improvement within criteria OR one criterion is missing from entry.
All criteria listed below are met or have been exceeded for each entry.

What does work that “exceeds expectations” have?

✓ Each video’s notes are on a different page.
✓ The video’s title is written as it appears in the video on the top line of the paper.
✓ The notes are legibly written.
✓ Highlighting or colors are used to emphasize key points, new vocabulary, and/or important concepts.
✓ Examples are documented in some way when given in the video.
✓ Pictures, charts, or graphs are used to display details provided in the video.
✓ A summary of the video content is provided at the end of the notes. Please emphasize the summary in some way (title it, star it, highlight it, etc.)

Notes are to be original work and are not to be copied from a peer – these serve as a log of what you have learned from the video. Copying them from a peer and not watching the video does you no good. You will receive zero credit if you are found submitting work that is too closely aligned with a classmate’s work.
Assignment #2 - Biological Collection Photo Blog – due 2nd day of AP Biology

For this assignment, you will “collect” 25 photographic examples of biological terms/concepts and post them on a photo blog. Select any of the items from the Biological Collection List to include in your blog. This will introduce you not only to the language of biology, but also emphasize that biology is something that’s DONE not just memorized. A hardcopy of your Photo Blog Table of Contents AND a link to your photo blog is due the second day of class. The link should be written on the table of contents AND emailed to your AP Biology teacher. Please see your teacher if access to the needed technology is an issue.

Directions for the Biological Collection Photo Blog:

1. “Collect” an item by taking a picture of it. Define, in your own words, the biological term/concept. Also within a couple of statements, explain how the picture represents the term or concept. Use the Biological Collection List on page 4 to select terms/concepts for your blog. Page 6 will give you examples of what entries should include.
2. Upload the photo, definition, and explanation to a blog that you create for the class. Google’s Blogger is a free and easy blog. Find instructions on page 7 of this packet on how to set up a blog.
3. Be creative. If you choose an item that is internal to a plant or animal, like phloem, you could submit a photograph of the whole organism or a close up of one part, and then explain on the blog what phloem is and specifically where phloem is in the specimen.
4. Use original photos ONLY. You cannot use an image from any publication or from the internet. You must take the photo yourself. The best way to prove that the photo is your work is to have something in your picture that represents you. This could be a key chain, pen, bracelet, small toy, etc. Submit a picture of you with your proof object when you hand in your summer work.
5. You should only use natural items. Take a walk in your neighborhood, go to the zoo, go for a hike in the woods, etc. Humans are natural items and may be used, but only for a few entries.
6. This is an individual project. While brainstorming, discussing, and even going on collecting adventures together is welcome, your items and photos are to be unique. With over 90 concept choices, probability says there is a very slim chance that any two students will have the same items chosen from their list.
7. Be careful and respectful! Never touch plants or animals you are unfamiliar with. Don’t kill or hurt any organisms. Don’t remove any organisms from the natural environment.

<td>10</td>
<td>Blog is easy to follow and neatly presented</td>
</tr>
</tbody>
</table>

* Points in this selection are awarded in an all or none format. If the guideline is not fully met, no points will be awarded.

Your photo blog is worth a maximum of 150 points (125 points for your photo blog (5 points for each photo blog entry) and 25 points for a completed Blog Table of Contents)
Biological Collection List

1. Adaptation of an animal
2. Adaptation of a plant
3. Altruistic behavior
4. Amniotic egg
5. Analogous structures
6. Animal that has a segmented body
7. Anther and filament of stamen
8. Archaebacteria
9. Asexual reproduction
10. ATP
11. Auxin producing area of a plant
12. Basiodiomycete
13. Batesian mimicry
14. Bilateral symmetry
15. Biologically magnification
16. C3 Plant
17. C4 Plant
18. CAM Plant
19. Calvin Cycle
20. Cambium
21. Cellular respiration
22. Commensalism
23. Coevolution
24. Connective tissue
25. Cuticle layer of a plant
26. Detritivore
27. Dominant vs. recessive phenotype
28. Ectotherm
29. Endosperm
30. Endotherm
31. Enzyme
32. Epithelial tissue
33. Ethylene
34. Eubacteria
35. Eukaryote
36. Exoskeleton
37. Flower ovary
38. Frond
39. Gametophyte
40. Genetic variation within a population
41. Genetically modified organism
42. Gibberellins
43. Glycogen
44. Gymnosperm cone – male or female
45. Gymnosperm leaf
46. Hermaphrodite
47. Heterotrophy
48. Homeostasis
49. Homologous structures
50. Hydrophilic
51. Hydrophobic
52. Introduced species
53. Keystone species
54. Krebs cycle
55. Lichen
56. Lipid used for energy storage
57. Long-day plant
58. Mating behavior (be careful!!!)
59. Metabolism
60. Mycelium
61. Mycorrhizae
62. Niche
63. Parasitism
64. Parenchyma cells
65. Pollen
66. Population
67. Predation
68. Prokaryote
69. Radial symmetry (animal)
70. Redox reaction
71. Rhizome
72. Seed dispersal (animal, wind, water)
73. Sexual reproduction
74. Spore
75. Sporophyte
76. Succession
77. Taxis
78. Territorial behavior
79. Tropism
80. Unicellular organism
81. Vestigial structures
82. Xylem

Notice the toy giraffe in the pictures below. This is this blogger's proof object and is used to demonstrate that the photographs in the blog entries are indeed their original. **Make sure you have proof object in each of your photos.**

4. Detritivore

This is a picture of an earthworm. The earthworm represents a detritivore. A detritivore, also called a decomposer, is an organism that consumes non-living organic materials (corpses, fallen plant material, and wastes) to obtain its energy and nutrients. They can be found in many different areas (land and water). They can also be found in many different types, for example, fungi, bacteria, and protists, as well.

10. Modified Leaf

This is a picture of pine needles. Pine needles are an example of a modified leaf of a plant. A modified leaf is one that has adapted to perform another function, other than photosynthesis and transpiration. A pine needle's shape functions to retain moisture, which is helpful in dry and windy areas.
Setting up your AP Biology Biological Collection Photo Blog using Google’s Blogger

1. Set up a Google account if you don’t already have one.

2. In the Google Apps tool bar (upper right corner), select Blogger.

3. Next select Blogger Profile – Create a Limited Blogger Profile.

4. Next you’ll need to enter a Blogger Profile. Use AP Bio_First Name_Last Initial as your format. (You’ll probably want to de-select the Email Notification box.)

5. Click New Blog and follow the rest of the directions for setting up your photo blog for AP Bio.

6. Remember to upload your original 25 photos, definitions, and explanations by the 2nd day on AP Biology to your blog. Email a link to your blog to your AP Biology teacher by the 2nd day as well.
Guidelines for Safe Blogging (Adapted from Kim Foglia's Class Blog)

Blogging is a very public activity. Anything that is posted on the Internet stays there. FOREVER! Deleting a post simply removes it from the blog it was posted to. Copies of the post may exist scattered all over the Internet. That is why we need to be careful and follow some simple, clear, safety rules.

FIRST RULE: To protect your privacy, you need to set up your account using ONLY your first name. This means that many of you need to go in and change your profile. If you have the same first name as another classmate, then let's add only your last initial to your first name, like DanielF.

SECOND RULE: We do not use pictures of ourselves in our profiles. If you really want a graphic image associated with your posting use an avatar -- a picture of something that represents you but IS NOT of you.

Other teachers who have blogged with their classes have come up with a list of guidelines for student bloggers. One of them, Bud Hunt, has these suggestions, among others:

Students using blogs are expected to treat blogspaces as classroom spaces. Speech that is inappropriate for class is not appropriate for our blog. While we encourage you to engage in debate and conversation with other bloggers, we also expect that you will conduct yourself in a manner reflective of a representative of this school.

Never EVER EVER give out or record personal information on our blog. Our blog exists as a public space on the Internet. Don’t share anything that you don’t want the world to know. For your safety, be careful what you say, too. Don’t give out your phone number or home address. This is particularly important to remember if you have a personal online journal or blog elsewhere.

Again, your blog is a public space. And if you put it on the Internet, odds are really good that it will stay on the Internet. Always. That means ten years from now when you are looking for a job, it might be possible for an employer to discover some really hateful and immature things you said when you were younger and more prone to foolish things. Be sure that anything you write you are proud of. It can come back to haunt you if you don’t.

Never link to something you haven’t read. While it isn’t your job to police the Internet, when you link to something, you should make sure it is something that you really want to be associated with. If a link contains material that might be creepy or make some people uncomfortable, you should probably try a different source.

Keep all of these in mind as you create you Biological Collection Photo Blog for AP Biology. Email your teacher if you have questions or concerns about blogging.
